SUMMARY

Software Engineer and ITB graduate with experience contributing to backend, frontend, automation, and cloud-based projects. Curious by nature, I learn new technologies as needed through hands-on work, Bangkit, and Google Arcade. I enjoy turning real problems into clean, scalable solutions and continuously growing as an engineer.

WORKING EXPERIENCE

LG Sinarmas - Software Engineer

June 2025 - Present

- Designed and collaborated on developing a Python-based monitoring system that automated authentication and resource usage collection across 500+ servers, reducing a manual 1-day reporting process to ~2 hours..
- Contributed as a Backend developer to an internal Job Portal, implementing features for personnel requests, selection tracking, and automated notifications.
- Led frontend development for an internal microservice platform covering Learning Management, Job Requests, Recruitment, and Employee Management, including SSO integration and shared UI components via an internal NPM package.
- Developed an AI-powered internal knowledge platform with RAG, hybrid BM25 + multilingual vector search, document ingestion/OCR, knowledge graph exploration, department-level RBAC, and source-grounded citations; currently extending AI capabilities to CV screening and rubric-based candidate reranking.
- Developing a Duolingo-style AI-assisted quiz and drill platform for in-house employee training, with an initial focus on Korean language learning for cross-company collaboration.

Tech Stack: Java, Springboot, React, Typescript, Python, Langfuse, Go, Coolify, LiteLLM

Dr.Meoww (Freelance) - Full Stack Developer

May 2026 - Present

- Developed a business management platform covering POS, pet and owner records, condition reporting, employee attendance, payroll, and cash-advance management.
- Built the frontend with React and TypeScript and used Supabase Functions with Row Level Security to minimize backend infrastructure and maintenance costs.
- Implemented WhatsApp automation and real-time employee location tracking for operational workflows.
- Converted the employee web application into a mobile app using Capacitor, reusing the existing codebase when browser-based GPS accuracy proved insufficient.

Tech Stack: React, Typescript, Supabase

byGewa (Freelance) - Full Stack Developer

December 2025 - January 2026

- Built a custom full-stack ordering system to support complex product configurations beyond standard form tools.
- Designed a secure serverless backend with token-based authentication and automated reporting & data backups.
- Integrated Google Maps APIs (Autocomplete, Geocoding, Places) to ensure accurate delivery location handling.

Tech Stack: Javascript, App Script, Google Cloud Platform

Google Arcade - [Facilitator](#)

July 2025 - October 2025

- Collaborated with a team of facilitators to guide participants through complex Google Cloud labs, ensuring successful completion of arcade challenges while simultaneously earning advanced cloud credentials.

Tech Stack: Google Cloud Platform, IAM, BigQuery, GKE, Compute Engine

Bangkit 2024 - [Mentor Machine Learning](#)

February 2024 - July 2024

- Guide 23 Machine Learning Path cohort of Bangkit 2024 Batch 1 to graduate from the program.
- Tutor and help cohort with any issues throughout the program (Technical issue related to machine learning and data analysis, time management, and task management).

Tech Stack: TensorFlow, Python

Mekari - Information Security & Compliance Officer

June 2023 - June 2024

- Lead the project initiative as the main PIC, Integrating Chat GPT model to Google Sheet through App Script to interface with the InfoSec database and answer division related queries.
- Collaborated with all divisions (Marketing, Sales, etc.) on an initiative to secure sensitive data by tracking data usage, storage locations, and access patterns.

Tech Stack: Javascript, App Script, AWS S3, AWS Lambda

EDUCATION

Bandung Institute of Technology, Information System and Technology

Aug 2020 – September 2025

- Relevant Coursework: Computer Networks, Computer Systems and Architecture, Database Modeling, Object-Oriented Programming (OOP), Database Management, Software Engineering, Web and Mobile Application Development, Integrated System Technology, Information Security.

CERTIFICATES

Agile Development - [Agile Academy Indonesia](#)

- Completed professional training in Agile methodologies (Scrum/Kanban), focusing on iterative development, sprint planning, and efficient team collaboration in enterprise environments.

TensorFlow Machine Learning Developer - [Bangkit 2023](#)

- Earned Google-recognized certification for proficiency in building and deploying deep learning models.

SKILLS

Programming Languages: Python, Java, SQL, HTML/CSS, Typescript, Javascript, C#, Go

Framework: React, React Native, Springboot, PostgreSQL, App Script

Interests: Web Development, Mobile Development, Cloud, DevOps, AI

Tools: Git, GitHub, GitHub Actions, Postman, Visual Studio Code, DBeaver, IntelliJ, AWS S3, AWS Lambda, Vercel, Netlify, Docker, Firebase, GCP, Supabase

Languages: English, Indonesia
